Project - *(INSERT NAME OF APP)*

Description
TODO
(Insert app name) is a sharing service that will create a network of food delivery which is a highly sought after service by many individuals. Unfortunately a large number, if not majority, of food chains or restaurants do not offer this service. *(Insert app name)* solves this problem through letting everyday people who happen to be at the right place at the right time take over this service at zero cost for the food store.

How it Works
TODO
The service allows connection between: hungry individuals that are unable or unwilling to make a trip to the store and are looking for a delivery service; with individuals that are currently at a restaurant, fast food, or food store.

Challenges for *(Insert app name)*
TODO
When to pay? Before or after food delivery?
How to pay? Online or in person?
How much to pay? Can be fixed; If flexible -> need a way to judge price (distance/location?)
Who will deliver? Hire deliverers? Use volunteers? Mix of both?
